

1. What is CAD?
 - a. CAD = Computer added design, Autocad is an drafting software developed by Autodesk in 19982. This software use for design and drafting Engineering 2D & 3D drawings.
2. What is measurement (Using measure tape)
 - a. Meter SQMT = square meter
 - i. MM = millimeter
 - ii. CM = Centimeter
 - iii. M = Meter
 - b. Feet SQFT = square feet
 - i. Inches

3. Drawing Unit (**UN Space**) = For Set Unit
Meter Setting

A Drawing Units [X]

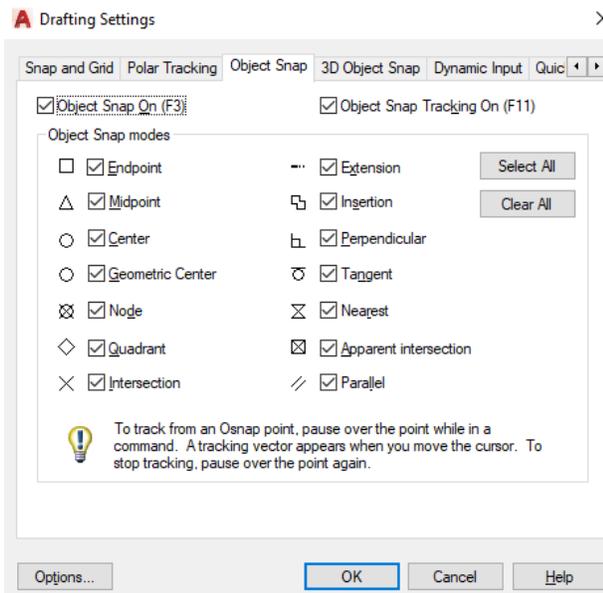

Length Type: Decimal Precision: 0.00	Angle Type: Decimal Degrees Precision: 0 <input type="checkbox"/> Clockwise
Insertion scale Units to scale inserted content: Meters	
Sample Output 1.50,2.00,0.00 3.00<45,0.00	
Lighting Units for specifying the intensity of lighting: International	
<input type="button" value="OK"/> <input type="button" value="Cancel"/> <input type="button" value="Direction..."/> <input type="button" value="Help"/>	

Feet Setting

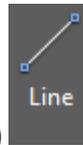

A Drawing Units [X]

Length Type: Architectural Precision: 0'-0"	Angle Type: Decimal Degrees Precision: 0 <input type="checkbox"/> Clockwise
Insertion scale Units to scale inserted content: inches	
Sample Output 2",2",0" 3"<45,0"	
Lighting Units for specifying the intensity of lighting: International	
<input type="button" value="OK"/> <input type="button" value="Cancel"/> <input type="button" value="Direction..."/> <input type="button" value="Help"/>	

4. **CTRL + G** for Hide and show Grid Line
5. **F7** also for hide and show grid line

6. Object Snap (**OS Space**) make sure all object snap mode active.

7. Line Tool (**L Space**) Create line with shortcut key
 - a. Line tool use for create vertical and horizontal (segment) Line
8. Ortho **F8** for Ortho Mode : create line constrained and perpendicular direction.

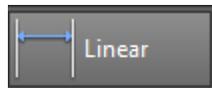

9. Polyline (**PL Space**) use for create straight line segment as well as arc. Polyline connected each line of segment
 - a. When you using polyline **A** for Arch and **L** for Line again.

10. (D Space) Dimension Style manager
 - a.

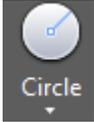

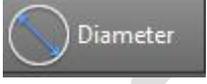

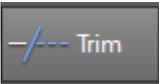

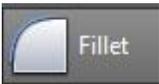

11. Dimension (**DIM Space**) to Create linear or aligned dimension.

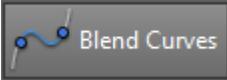

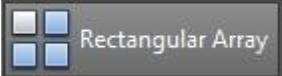

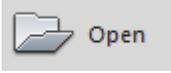

12. Linear Dimension (**DLI space**) use for create a linear vertical or Horizontal Straight perpendicular line dimension.

13. Aligned Dimension (**DAL Space**) For Create aligned constrained line dimension

14. Angular Dimension (**DIN Space**)  create an angular dimension
15. Circle (**C Space**)  Create center point circle there are to type of measurement in circle
16. Arch (**A Space**)  use for Create a three point arc.
- a. Radius (**DRA Space**)  Create a radius or Arc dimension. Radius dimension measure from center point on circle.
- b. Diameter (**DDI Space**)  Measure the diameter of a selected circle.
17. Rectangle (**REC Space**)  create rectangular Exp. 20,20.
18. Move Tool (**M Space**)  move selected object one location to another location. Moves objects a specified distance in a specified direction.
19. Copy (**CO Space**)  Copy selected object a specified distance or direction. Also use multiple copy.
20. Rotate (**RO Space**)  use for rotate selected object around a base point or angle.
21. Mirror (**MI Space**)  mirror an selected object or crate a mirrored copy. Create the other half copy.
22. Offset (**O Space**)  Create offset distance between two line or object.
23. Trim (**TR Space**)  trim an wanted segment.
24. Extend (**EX Space**)  Extend object to next edge to connect
25. Text (**T Space**)  you can write a text in cad.
26. Fillet (**F Space**)  Fillet use for connect 2 direction angle line, create rounds and fillet the edges.

27. Chamfer (**CHA Chamfer**)  cut the rectangular & corner angle distance.
28. Blend Curves (**BLE Space**)  create a tangent or smooth spline between the endpoints of two open curves.
29. Scale (**SC Space**)  Scale selected object bigger or smaller, also use for make drawing Meter to feet or Feet to Meter.
30. Explode (**X Space**)  Brake a compound object, make connected object separate.
31. Array (**AR Space**): There are 3 types of Array.
- Rectangular Array (**AR Space**):  use for create copy object rows and columns, Distributes object copies into any combination of rows, Columns and levels.
 - Path Array (**AR Space**):  distributes objects copies along a path.
 - Polar Array (**AR Space**):  distributes object copies in a circular pattern around a center point or axis of rotation.
32. Insert Block (**I Space**)  insert a block into the current drawing.
33. Match Properties (MA Space)  this tool use for applies the properties of a selected object to another object.
34. Layer Properties (**SA Space**)  Manage and create layers and layers properties.
35. Spline Fit (**SPL Space**)  make curve design draws a spline with fit points.
36. Construction Line (**XL Space V & H**)  Create a construction line V Space For Vertical line H Space For horizontal line.
37. Join (**J Space**)  Join similar object to form a single line, unbroken object.
38. Hatch (**H Space**)  Fills an enclosed area or selected object hatch and pattern

39. Gradient (**GD Space**)  Fills an enclosed area or selected object gradient, gradient fill one or two colors in object.
40. Boundary Creation (**BO Space**)  Create a region or a polyline from an enclosed area boundary.
41. Table (**TB Space**)  Creates an Table in AutoCAD.
42. New (**CTRL + N**)  open new black document
43. Save (**CTRL + S**)  save current file document.
44. Save As (**CTRL + Shift + S**)  save as current already saved document an other name or an other location.
45. Open (**CTRL + O**)  Open an existing document
46. Print (**CTRL + P**)  print document setting.
47. Zoom (**Z Space**) Zoom Selected area
48. Zoom in or zoom out (**Z space Space**) Zoom in or zoom out with mouse.
49. Zoom all (Z Space A Space) Zoom All drawing fit to the page.
50. Erase (Delete)  delete or remove all selected object.
51. Group (**G Space**)  Create a group of objects.
52. Ungroup (**UNG Space**)  Explodes or ungroup object or group.
53. Calculator (**QC Space**)  Opens the Quick Calculator in autocad.
